

**Changes Installed:**

The table below is a listing of the Help Desk Tickets (HDT) resolved in PBUSE Version SCP06.1-OOC3.

**05/25/07**  
**Changes Installed in SCP06.1-OOC3**

HDT	Category	Summary	Description	Resolution	Dups
HD04674	PB-E	Several LINs have dropped from the Authorization table	The user was reconciling his hand receipt with the USPFO and noticed that the following LINs were no longer on the property records: H31110, D03091, E56801, K98250, K30548, L91975, V74738, M75577 and M23594.	The constraint errors that occurred when attempting to update user-defined authorizations to the current effective date, which caused Authorizations to drop, has been fixed.	HD04700 HD05493 HD07191 HD07199 HD07218 HD09264 HD10823 HD14906 HD17492 HD17711 HD19135 HD19413 HD24651 HD24939 HD24984 HD25390 HD25524 HD25868 HD26332 HD26360 HD26699 HD26991 HD26997 HD27095 HD27159 HD27199 HD27203 HD27210 HD27222 HD27245 HD27366 HD27433 HD27558 HD27674 HD28556 HD28824 HD29242 HD29695 HD29965 HD30127 HD30414 HD30485 HD30686 HD30800 HD31833 HD32053 HD34417 HD36062

HD14904	PB-E	LOGTAADS update does not reflect accurately	LOGTAADS update does not always reflect authorizations that are within 365 days of effective date.	Implemented fixes which enable the LOGTAADS process to automatically identify units with Effective Dates that are in the 365 day window. This will ensure that LOGTAADS is updated to reflect quantities which will be authorized within the next year, in a timelier manner.	
HD15889	PB-E	Request that PBOUSE have a pop-up message to tell PBO(s) they have a new LOGTAADS Document to load	Request that PBOUSE have a pop-up message to tell PBO(s) they have a new LOGTAADS Document to load.	In Lieu Of (ILO) of a Pop-Up message, the user will be able to compare when the LOGTAADS was run on PBOUSE and what is still showing at LOGSA for download. A new screen was developed – LOGTAADS Raw Data, which can be reached by through the LOGTAADS Visibility Listing process.  The user will still have to call the Help Desk to request a LOGTAADS update.	
HD28897	PB-E	Assets from DPAS migration are coming over without authorizations	Assets from DPAS migration are coming over without authorizations. Develop a process to create authorizations for missing assets.	Added the script to create Authorizations for each UIC after a DPAS migration takes place.	
HD30057	PB-E	DLA should not be changed due to LOGTAADS update	Customer has a hand receipt with a DLA that is not reflected on any reports: daily report, document register, or search query by Date inserted or Transaction Date.	Code was removed which updated the Type Authorization Code (TAC) in the asset record resulting in the update of the DLA. The TAC is already maintained in the authorization table, so it doesn't need to be maintained in the assets table.	HD30094

HD32467	PB-E	Serial numbers and registration numbers not correct	The customer noted that the serial numbers were in the registration number field and that the registration numbers were in the serial number field. He noticed this when the assets were brought down when the CDR was created.	Updated the code to correctly apply Serial/Registration Numbers at the Unit Level during a DPAS migration.	
HD35179	PB-E	Update LOGTAADS processing program to include performance improvements	Update LOGTAADS processing program to include performance improvements	Rewrote software to utilize more efficient database queries and update code while processing the LOGTAADS. Also, implemented code which attempts to identify when a UIC needs to have LOGTAADS run, so that the LOGTAADS can be updated in a more timely manner.	
HD36614	PBUSE	Upgrade PBUSE Firewall to latest level	Fire Wall was upgraded with HD34648 then downgraded with HD35807 after recommendation from Oracle, to correct a data corruption issue. It was later found that the problem was a Fort Lee Fire Wall configuration issue. The PBUSE Fire Wall can now be safely upgraded again.	The Firewall Firmware has been upgraded to the latest version.	
HD36619	PBUSE	Install Oracle April security patches	Install Oracle April security patches	The database and web servers with were updated with the latest patches issued by Oracle, covering security related fixes for the Oracle database software.	

HD36748	US-E	Implement interim fix to allow users to remove duplicated serial numbers	Implement interim fix to allow users to remove duplicated serial numbers. A more comprehensive fix is being implemented for SCP07, but since that won't be out until August or September; we can implement a more limited fix that won't have as large of an impact which will allow for users to remove records themselves.	Updated the application to allow Unit Level users to remove "duplicate" Serial Numbers for end items as well as components.	
HD36794	PB-E	Add the capability for the user created catalog data to be pulled in a format that can be used by SLAMIS	Add the capability for the User-Created Catalog data to be pulled in a format that can be used by SLAMIS. This file will be used to assist in the creation of non-standard LINS and MCN(s) for data being transferred from DPAS into PBUSE.	Added the capability for Data Migration Center (DMC) to create a User-Created Catalog request that can be sent to SLAMIS in the DPAS migration process.
